Subject: Fund for a PCR machine

Dear Sir/Madam

With reference to the above subject, we want to once again thank AEUPA and of course DRC Diaspora for the help with the renovation of the library of the faculty of Pharmacy of Kabul University.

As the previous project was a success and of great achievement for our students and staff. One of our projects with the faculty of pharmacy is to develop the faculty laboratory facilities. For the time being the Ministry of Higher Education of Afghanistan cannot fully support to build the capacity of the mentioned laboratories. We are hoping to get help as well with this project. We understood that AEUPA has gathered some equipment's donated by various universities in Holland, unfortunately not yet a PCR machine and related equipments and reagents. We will use the PCR for practical works for the students in the field of Microbiology, Molecular biology and Biochemistry and also for research purposes for the staff and students. With it's multiple purpose this machine nowadays should be available in every research institute to improve knowledge and expertise. Therefore this is one of the equipment's that is on top of our necessity list.

Looking forward to hear from you at the earliest time for starting a joint collaboration with the faculty of pharmacy of Kabul University toward improving the pre-service training in Afghanistan.

Thank You.

Yours Faithfully

Assoc. Prof. Aqa Mohd Jakfar
President of ANPA
